A) C **B)** I

(Please note: The following questions are related to a specific reading passage, available solely before the first question. Remember, referring back to the reading text while answering the questions may be helpful to ensure accuracy.)

THE NEW BIOCO

Jack got a new job at a **biotechnology** company called Bioco. Bioco **manufactured** drugs to treat **diabetes** and high **cholesterol**. Jack's job was to use a tiny **mechanism** to get **nectar** from flowers. The nectar was a main ingredient in the drugs. Jack liked his job, and he thought that Bioco was a caring company. However, Jack soon learned that the company wasn't as kind as he first thought.

Bioco's motto was "Make the Earth a Better Place." However, this motto was **deceptive**. The company actually did a number of really bad things to the environment. The company produced a lot of smog and harmful **acid**. Bioco poured the acid in a nearby river, which caused **erosion** and made fish **prone** to illness.

After a few weeks at the new job, Jack saw all the bad things Bioco was doing. He had always had strong **ethics**, and he knew he had to do something. One day, while the Bioco workers were eating in the cafeteria, Jack stood up and gave a speech. He said, "My fellow coworkers, I know you have all seen the evil things our company is doing. I have a notion that we can fix them if we form a **coalition**. We can go to the **administration** and tell them we'll quit if they don't **eliminate** the problems. They'll have no choice but to listen to us."

Jack explained what they were to do. His coworkers liked his **explicit** plan. They went to the **administrative** offices and demanded that Bioco stop damaging the environment, or they all would quit. One supervisor said to them, "Thank you for being **straightforward** about this issue. Since I can't afford to lose all of you workers, I guess we'll just have to fix things."

Jack, his supervisor, and his coworkers spent the next month designing a new **framework** for the company. They cleaned up the acid from the river and **minimized** the amount of air pollution the company released. At last, the company motto became apt.

36. Bioco was a biotechnology company that manufactured diabetes and high cholesterol.
A) TRUE **B)** FALSE

37. Jack used a mechanism to get nectar from flowers.
A) TRUE **B)** FALSE

38. The new framework involved an explicit plan to fix the smog and acid problems.
A) TRUE **B)** FALSE

39. The waste acid caused erosion and made fish prone to illness.
A) TRUE **B)** FALSE

40. After the company minimized Jack's ethics, the motto became apt.
A) TRUE **B)** FALSE
